

Modernize to Reinvent

Leverage the Cloud for business agility and cost efficiency.

Architect or re-architect applications to be modular, scalable, fault tolerant and ultra-responsive.

Why Modernize Applications?

- Vulnerability to disruption from tech-driven innovation.
- Compromised user experience from the availability of high-quality mobile applications.
- Escalating costs and decreasing margins from under-optimized operations and infrastructure.

Reduce time to market - 40-60%

- Less time required to translate business ideas into production-ready software.

Reduce defects by up to - 60%

- Updated technology enables the development of higher-quality applications.

Increase motivation of employees - 30-40%

- High-level talent will be attracted by opportunities to work with state-of-the-art technologies.

Increase IT productivity - 20-30%

- Complex project bureaucracies are eliminated.
- Joint business-IT development early on reduces the need for rework in later stages.

“ **Success in the digital disruption era will belong to enterprises that transform, accelerate and optimize their applications for business agility, security, and competitive advantage.** ”

- Director of IT, International Affairs Agency

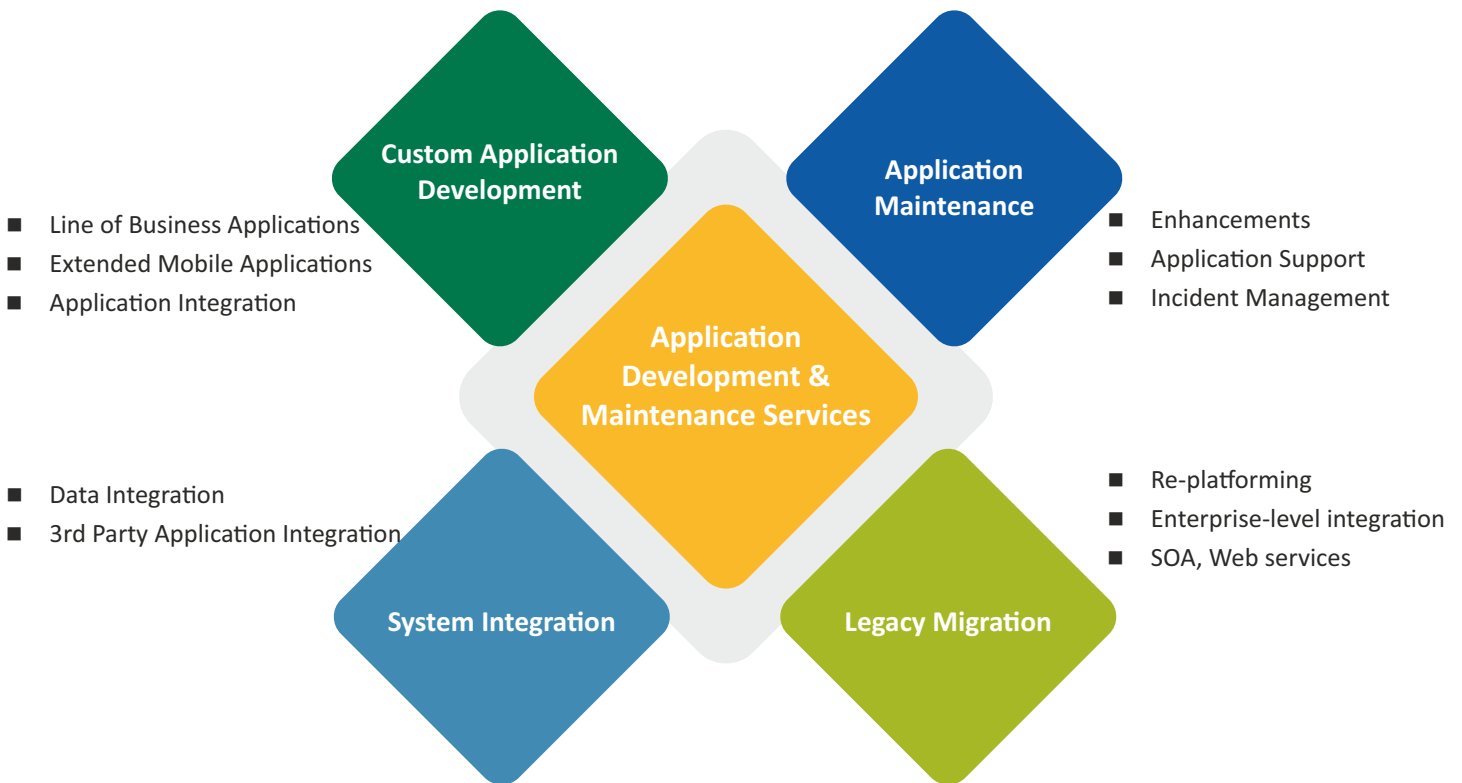

3 Game changing questions for enterprises to determine application readiness

- Is my current IT environment enhancing business efficiency and controlling costs?
- How ready is the environment to support future business plans?
- Where and how do I begin the transformation journey?

Trigent’s Enterprise Application Development and Maintenance (ADM) solutions are designed for enterprise-wide digital transformation. We effectively maintain and run their mission-critical applications, helping them to increase their ROI and free up resources to focus on strategic initiatives.

“ Software-enabled customer interactions, revenues from digitized channels and products are expected to exceed 40% in industries such as insurance, retailing, and logistics.

– McKinsey ‘The perils of ignoring software development’.

Success Stories

Improved Customer Experience for Investment Firm

Full-service investment consulting firm representing assets of \$1 trillion. The firm’s researchers relied on a legacy portal to present investment plans to clients. Cumbersome processes and human intervention led to delays, inaccuracies, and shoddy presentations. Trigent’s self-service application automated the process with 100% data accuracy, reduced lead times and operational efficiency.

SaaS Enables Digital Customer Engagement

Real estate technology firm managing all aspects of properties and physical assets through technology. The firm’s legacy application worked only on Windows, was difficult to maintain, and hampered efficiency. Trigent developed a web-based solution which works on Windows and Mac which reduced customer onboarding time from weeks to hours.
