

# A Complete Solution Footprint for Your Business

Customers expect faster shipments. They also expect a lot more flexibility and transparency but at lowered prices. For T&L companies this expectation translates into better capabilities, seamless integration with partners and intuitive user experience. We understand and deliver data-and technology-led transformation in all areas of operations for transportation and logistics software providers, fleet and freight forwarders, and third-party logistics providers.

## Get real results from real-time information

Improving asset utilization

Lowering operational costs

Improving efficiencies

“ As a business, we've grown a lot since our engagement with Trigent. We have benefitted tremendously from the marked improvement across key operations. Our platform has been well-designed, operationally maintained, and is able to sustain our rapid growth.

— TruckStop

## Be future ready by overcoming the challenges

- Improve business processes.
- Provide real-time visibility into inventory tracking and management.
- Cut transportation costs.
- Enhance supply chain transparency, safety and efficiency.
- Ensure adherence to regulatory and other compliance.

## Our services help you to:

- Streamline operations, enhance security, and increase productivity.
- Improve efficiency, and productivity in logistics.
- Improve asset utilization and operational costs.
- Enable route optimization, geo-fencing, and geo-tagging of vehicles.
- Increase customer retention.
- Reduce time to market.

# Moving Businesses in the Right Direction

Our industry-specific solutions range from customized rating and billing engines, process optimization to reductions in outstanding receivables and overall costs. Our ability to deliver results-oriented solutions allows our customers to increase efficiency, lower their overall costs, and even reduce the number of days that receivables are outstanding.

We can link critical ERP data networks, set up secure data centers, develop and enhance online reservation and inventory management systems, migrate legacy applications, automate mission critical e-business

portals, and provide other high-efficiency technology systems. Our solutions add speed, accuracy, and efficiency to your business:

- Fleet Management Software
- Inventory Management
- Logistics Scheduling and Routing
- Procurement Process Optimization
- WMS/TMS Rationalization, and Integration
- Supply Chain Integration

Transportation KPIs

Route optimization

Load management

Effective communication  
with carriers

Carrier selection

## Success Stories

### A leading technology solution provider with a mission of safe school bus-riding through fleet tracking, safety, and optimization

Improve management and operational efficiency for fleet managers, dispatches, support center operators, and routing administrators.

#### Solution

A SaaS-based solution with real time bus route tracking and analysis, effectively track driver work schedule. Improved accountability and traceability with enhanced security.

#### Benefits

- Cloud based software allowed rapid growth.
- Wi-fi & cellular operations.
- Real time tracking with accurate ETA.
- RFID based student tracking for increased accountability.

### Software Provider for 2500 Independent Truck Operators – route planning to invoicing, fuel management and billing

Provide 24x7 development and maintenance services, workflow management solutions to reduce manual transactions, manage OBE data for driving optimal operations.

#### Solution

Developed a robust, scalable application, Transformed the existing web-based logistics and accounting solution, enhancing its digital capabilities

#### Benefits

- Optimize TCO for truck operators.
- Drive down software maintenance costs.
- Reduce time to market for new features.
- Automate all workflows, achieve paperless operations.
