20 Most Promising SharePoint Solution Providers 2016

Enterprises of all sizes are keenly scouting for cost-effective ways to streamline their collaboration and communication processes and improve their workflows. Alongside, effective management and maintenance of IT governance—allocation of resources, integration approaches, and implementations—has become as a crucial component for an enterprise's success or failure. This is where SharePoint comes into play with an extensive set of functionalities bundled together that allows large or growing organizations to store and manage more data on their systems.

SharePoint 2016 version handles hybrid environments—a mix of on-premise and cloud content—which allows users to simultaneously search for both on-premise content and the content stored in the cloud. Today, the solution providers in the SharePoint space proffer innovative solutions and services to help expand Microsoft SharePoint out-of-the-box capabilities, streamline workflows, maximize efficiency,

and enhance overall productivity. The additional benefits of SharePoint implementations entail better document management, versioning, workflow integration, effective collaboration and reporting capabilities, and automated business information handling across the enterprise. With SharePoint administration and integration services being offered by a multitude of vendors in the marketplace, it can be quite cumbersome for the CIOs to zero in on the right fit for their organization.

A distinguished panel comprising of CEOs, CIOs, VCs, analysts including CIOReview editorial board has selected the "20 Most Promising SharePoint Solution Providers 2016" listing the best vendors and consultants who provide key SharePoint solutions and consulting and migration services. In the last few months, we have looked at hundreds of SharePoint solution providers and shortlisted the ones that are at the forefront of tackling challenges while managing SharePoint deployments.

We present to you CIOReview's 20 Most Promising SharePoint Solution Providers 2016.

Trigent Software
Pathway to Productive Workplace with SharePoint

Chella Palaniappan, Vice President–Client Services, Trigent Software, believes that security, privacy and compliance are serious concerns for CIOs in the SharePoint landscape. "Over 85 percent of the senior management upload work files to personal accounts–mainly to easily collaborate with the content." They have easy access to sensitive data that can leave this data exposed and vulnerable. In tandem, SharePoint upgrade process is a concern for CIOs. "Their IT teams do not have the bandwidth to make constant changes and upgrades." With Office 365 and SharePoint online, the possibility and the process of upgrade from on-premises to cloud has further complicated the situation. Addressing these quandaries for enterprises is Trigent Software that helps companies implement Information Rights Management (IRM) that limits the actions a user can take on a file, even after it is downloaded. The company also empowers clients to migrate to latest versions of SharePoint. "We use SharePoint to connect the dots for boosting a sturdy growth-driven company."

Trigent's full range of well-structured services help clients plan, develop, and deploy SharePoint-based solutions to increase operational efficiency, employee productivity and collaboration. "We ensure complete participation of clients while designing the solution and user interface, with constant communication throughout the project phase, and

extensive training to both users and administrators." says Palaniappan.

Following a disciplined and systemic approach in developing a scalable SharePoint solution to ensure desired ROI, Trigent delivers intranet and extranet solutions to clients. "Our technology experts work with clients to make intelligent decisions from data using Microsoft Power BI," explains Palaniappan. Clients can search and access public and internal data from Excel, as well as the Power Map 3D data visualization tool for mapping, exploring and interacting with geographic and temporal data, and Power Pivot. Finally, clients can create interactive charts, graphs and other visual representations of data within Power View. "We have integrated SharePoint as an information management platform for several clients, to ensure content control, better collaboration while tying together people and processes through role-based workflows."

Alongside SharePoint consulting, Trigent offers offshore development services from requirements definition to design, development, testing and launch.

Clients can benefit from .NET, mobile and java application development services that Trigent provides to create seamless communication and distribution models. "Our Software Development Center accelerates development, transforms applications, and increases cost savings."

Trigent's extensive training and expertise in delivering SharePoint solutions

Chella Palaniappan

with higher ROI has given the company a unique stature. "We use a judicious mix of onsite, onshore and offshore resources to keep costs low," delineates Palaniappan. The company has garnered an esteemed clientele over the years. In an instance, Undertone, a digital advertising company, required a cloud based information management platform for seamless communication and collaboration across geographies at low cost. Using SharePoint 2013, Trigent helped Undertone to create new visually appealing Global Intranet linking users from eight different locations. The Intranet was easy to monitor and maintain by Information workers and content authors with a cost effective way to monitor information. Additionally, it was rendered with rich UI that was in line with customer's external image.

Trigent will continue to help clients switch from a paper-based system to an automated SharePoint-based system to manage workflows, streamline processes and ensure greater flexibility and functionality. "I see a future of collaboration, which is all about benefitting the customer," concludes Palaniappan. **CR**
